

Model Number: CM1-B
Colour: Black

Model Number: CM1-W
Colour: White

IONN released a rewirable plug that conforms to the new South African standard SANS 164-2. This plug has a slim design and a straight cable exit direction. It is called the CM1 and provides enhanced safety features and enables three times the installation density compared to the old style South African plugs. To use this new style plug and get the related benefits you need to ensure that the wall socket also conforms to the new style.

The CM1 plug is easy to wire and can accommodate 3-core cables with a cord diameter up to 11mm. The CM1 plug has the necessary test certificate required by the SABS/NRCS to allow this plug to be legally sold in South Africa.

The CM1 plug has solid brass pins and is made from thick and durable plastic and has two gripping mechanisms making it easy to remove and install the plugs into matching wall sockets.

The wall socket and cable are not included, the images are for demonstration purposes only.

FEATURES

- Colour: Black
- Complies with SANS 164-2 Standard
- Horizontal & Vertical Gripping for easy removal
- Easy internal wiring
- Captive screws in the top cover
- Cable clamp mechanism covering the full range of cable thicknesses.
