Embedded PCB

Product Overview

The Cortex[®]-A72 Raspberry Pi[®] series PPC-CM4-101 (PN: CS12800RA4101) is a high-quality industrial Pi PC. It features a 10.1" Ten-point capacitive touch screen with a resolution of 1280 x 800 pixels and brightness of 400 cd/m².

Key Applications

- Human Machine Interface HMI
- Process Control
- Process Monitoring
- HMI
- IIoT node
- Environmental Monitoring
- PLC
- Automotive applications
- ATM...

It is available both as an embedded solution and as a device housed in a casing with bezels, thus facilitating different installation options:

- Installation on an industrial cabinet
- Integration with the existing equipment

The PPC-CM4-101 industrial Pi PC is based around the powerful Raspberry Pi[®] Compute Module 4, powered by the Quad Cortex[®]-A72 processor with a processor speed of 1.5GHz.

Ordering Options

Chipsee products can be customized during the ordering process. The product will be shipped with the pre-installed factory defaults if no extra requirements are specified. The table in the [Specifications](#) section provides information about the default options bundled with the product.

Note

You can order [PPC-CM4-101](#) from the official [Chipsee Store](#) or from your nearest distributor.

Pi[®] CM4 Module

The Pi[®] Compute Module 4 appears in different versions depending on the size of the DDR4 and eMMC.

The PPC-CM4-101 industrial Pi PC does not include the CM4 Raspberry Pi[®] module by default. If you would like to purchase it with a CM4, you can select it at the Chipsee store during the ordering process.

Operating System

This product comes with a pre-installed Raspberry Pi OS. Chipsee software engineers have created all the drivers, so every hardware feature is readily available for any standard development tool.

If your project requires a different OS, please [Contact us](#), and we'll make a [customized version](#) that suits your needs.

Optional Features

The PPC-CM4-101 industrial Pi PC does not include the 3G/4G/LTE modules by default. These modules are optional and can be selected at the Chipsee store during the ordering process.

Warning

Installation, repair, and maintenance tasks should be performed by trained personnel only.
Chipsee does not bear any responsibility for damage caused by inadequate handling of the product.

Specifications

The PPC-CM4-101 industrial Pi PC offers a broad range of performance and connectivity options for scalable integration, providing expandability according to future needs. Some of the key features are listed in the table below.

PPC-CM4-101	
CPU	Raspberry Pi® CM4, CM4 Lite; Quad Cortex-A72 at 1.5GHz
Storage	Support for 1 x TF Card ³
RAM	2/4/8 GB, Based on CM4
eMMC	16/32 GB, Based on CM4
Display	10.1" IPS LCD, 1280 x 800 resolution px, brightness 400 cd/m ²
Touch	10-point capacitive touch with 1mm Armored Glass
USB	2 x USB 3.0 Host, 1 x USB OTG
LAN	1 x Channel Giga LAN
Audio	3.5mm Audio Out Connector, 2W Speaker Internal
Buzzer	Onboard Buzzer, driven by GPIO
RTC	High accuracy RTC with farad capacitor, can work 1 week after power off (default) . High accuracy RTC with lithium coin battery, can work 3 years after power off <i>(optional)</i> .
RS232	Default to 2 x RS232, up to 4 x RS232
RS485	Default to 2 x RS485 ¹ , these 2 x RS485 can be configured as 2 x RS232
CAN	1 x CAN-BUS
GPIO	8 Channels, 4 Input, 4 Output
I2C	Not Supported
WiFi/BT	Supported but depending on the CM4 selected ²
ZIGBEE	Onboard Zigbee module, not mounted by default
HDMI	Not Supported
SATA II	Not Supported
3G/4G/LTE	Supported, not mounted by default
Camera	No
Power Input	From 12V to 36V
Current	800mA Max at 12V
Power Consumption	9.6W Typical

PPC-CM4-101	
Working Temperature	From 0°C to +60°C
OS	Raspberry Pi OS
Dimensions	CS12800RA4101P: 276 x 194 x 46mm
Weight	CS12800RA4101P: 1600g
Mounting Method	CS12800RA4101P: Panel, VESA

Table 280 Key Features

-
- 1** The RS485 circuit controls the Input and Output direction automatically, there's no need to control it from within the software.
 - 2** The default product without the CM4 does not include a Wi-Fi/BT module. You can include a CM4 that has the Wi-Fi/BT module at the Chipsee store during the ordering process.
 - 3** This TF card is designed for storage expansion, as the TF card uses the same pins with WiFi, it can't be used with WiFi at the same time

Power Input

The PPC-CM4-101 industrial Pi PC can be powered by a wide range of input voltages: From 12V to 36V DC. It is a **3 Pin, 3.81mm screw terminal** connector. As shown in the figure below.

Power Input

Note that the “+” sign represents the positive power input, and it is printed both at the casing and as a silk-screen on the board of the embedded version. The “-” terminal is shorted to the ground.

Power Input Definition		
Pin Number	Definition	Description
Pin 1	Positive Input	DC Power Positive Terminal
Pin 2	Negative Input	DC Power Negative Terminal
Pin 3	Ground	Power System Ground

Table 281 Power Connector

 **Note**

The system ground “G” is connected to power negative “-” on board.

Touch Screen

The PPC-CM4-101 industrial Pi PC uses a 10-point capacitive touch with 1mm Armored Glass screen. However, the Raspberry Pi OS supports only One-Point touch.

The figure below shows the capacitive touch screen connected to the motherboard via the USB connector.

Capacitive Touch Connector

Attention

A capacitive touch screen is susceptible to power noise and Electromagnetic Radiation (EMR). It may cause LCD ripples or even capacitive touch malfunction. If using a capacitive multi-touch test application, you might notice the touch points float erratically across the display. There are several solutions to this problem:

1. Use a high-quality Power Adapter Unit (PSU) with low EMR. You can also provide power from a battery.
2. Make sure that the PPC-CM4-101 Power Input connector (pin 3) is properly connected to the Power System Ground to provide sufficient EMI shielding and eliminate the problem entirely.
3. Bad GND problems can also be confirmed by touching pin 3 of the Power Input connector with one hand while operating the capacitive touch screen with the other hand. In this case, the operator's body acts as the Power System Ground.

Connectivity

There are many connectivity options available on the PPC-CM4-101 industrial Pi PC. It has 2 x USB 3.0 Host, 1 x USB OTG, 1 x Channel Giga LAN (RJ45) Ethernet connector supporting up to 1 Gbps, and 4 x UART and 1 x CAN terminals (RS232/RS485/CAN).

RS232/RS485/CAN

The serial communication interfaces (RS485, RS232, and CAN) are routed to a phoenix terminal, as illustrated in the figure below.

RS232-RS485-CAN on the PPC-CM4-101 Industrial PC

 **Attention**

1. RS485_3 and RS485_5 can control the input and output direction automatically. There's no need to control it from within the software.

2. The 120Ω match resistor for RS485 is **already** mounted by default.

3. The 120Ω match resistor for CAN is **NOT** mounted by default. Be sure to mount the match resistor when testing CAN.

4. The 2 x RS485 can be configured to 2 x RS232, if you want a custom configuration, you can contact us when placing an order.

The table below offers more detailed description of every pin and its definition:

RS232 / RS485 / CAN Pin Definition:		
Pin Number	Definition	Description
Pin 1	CAN_H	CAN BUS "H" signal
Pin 2	CAN_L	CAN BUS "L" signal
Pin 3	RS485_5-	CPU UART5, RS485 -(B) signal

RS232 / RS485 / CAN Pin Definition:		
Pin 4	RS485_5+	CPU UART5, RS485 +(A) signal
Pin 5	RS485_3-	CPU UART3, RS485 -(B) signal
Pin 6	RS485_3+	CPU UART3, RS485 +(A) signal
Pin 7	RS232_2_RXD	CPU UART2, RS232 RXD signal
Pin 8	RS232_2_TXD	CPU UART2, RS232 TXD signal
Pin 9	RS232_0_RXD	CPU UART0, RS232 RXD signal
Pin 10	RS232_0_TXD	CPU UART0, RS232 TXD signal
Pin 11	GND	System Ground
Pin 12	+5V	System +5V Power Output, No more than 1A Current output

Table 282 Connectivity Section

GPIO Port

The PPC-CM4-101 industrial Pi PC has a **phoenix connector**, as shown in the figure below. The table below gives details about the definition of every Pin.

⚠ Attention

1. In order to use the Isolated Output, you need to add an external Isolated Power to the VDD_ISO and GND_ISO. The power voltage should not exceed 24V.
2. The output current can achieve 500mA for every channel, but it also depends on the isolated power that is connected.
3. In order to use the Isolated Input, you need to add a signal to the ISO_InputX and GND_ISO. A 2.4K Ω resistor, as R6, can be added to limit the input current, as shown in the figure above. This resistor should work well for the 5-24V input signal. If your input signal is less than 5V, please change this input resistor.

Isolated GPIO reduced schematic

PIN1	PIN2	PIN3	PIN4	PIN5	PIN6	PIN7	PIN8	PIN9	PIN10	PIN11	PIN12
		IN4	IN3	IN2	IN1	OUT4	OUT3	OUT2	OUT1	GND_ISO	24V_ISO

GPIO Connector

GPIO Connector Pin Definition:		
Pin Number	Definition	Description
Pin 12	24V_ISO	Isolated Power +24V Input
Pin 11	GND_ISO	Isolated Ground
Pin 10	OUT1	Isolated Output 1
Pin 9	OUT2	Isolated Output 2
Pin 8	OUT3	Isolated Output 3
Pin 7	OUT4	Isolated Output 4
Pin 6	IN1	Isolated Input 1
Pin 5	IN2	Isolated Input 2
Pin 4	IN3	Isolated Input 3
Pin 3	IN4	Isolated Input 4

Table 283 GPIO Connector Pin-out

USB Connectors

There are 2 x USB 3.0 Host, 1 x USB OTG onboard, as shown in the figure below.

USB HOST Connectors

Attention

1. These two USB host connectors can drive 500mA for each channel at most.

The product has one USB Type-C OTG connector that works as a slave by default. You can use it to establish a connection with the host PC and for downloading the system to the eMMC of CM4 module.

USB Type-C OTG Connector

Warning

1. Be careful not to touch surrounding electronic components accidentally while plugging in USB devices into the embedded Industrial PC version.
2. Remember to unplug the Type-C cable after flashing OS, otherwise the USB hosts won't work.

LAN

LAN (RJ45) connector provides Ethernet connectivity over standardized Ethernet cables as shown in the figure below. The integrated Ethernet interface supports up to 1 Gbps data throughput. These Giga LAN signals come from the CM4 module directly.

RJ45 LAN Connector

Note

Use CAT5 or better cables to achieve full data throughput over maximum distance defined by the 1000BASE-T standard (100m).

WiFi & BT Module

The default PPC-CM4-101 without the CM4 does not include a Wi-Fi/BT module. If you include a CM4 that has the Wi-Fi/BT module, the product will have Wi-Fi/BT feature. The enclosed (CS12800RA4101P) variant of the product also includes an SMA connector for an external WiFi/BT antenna, as illustrated in the figure below.

WiFi+BT Antenna

Attention

The product does not come shipped with the Wi-Fi/BT module by default.

3G/4G/LTE Module

The PPC-CM4-101 industrial Pi PC is equipped with a **mini-PCle connector** that can connect to a 3G/4G/LTE module. The customer will also need a SIM Card Holder and a 3G/4G/LTE antenna to ensure 3G/4G/LTE works on the PPC-CM4-101. SIM card does **NOT** support hot plug. **Power off** before inserting or removing SIM card.

SIM Card Direction

Figure 939: 3G/4G/LTE Module

Figure 940: SIM Card Holder and 3G/4G/LTE Antenna

Attention

The product does not come shipped with the 3G/4G/LTE module by default. If you need to use 3G/4G/LTE, you can contact us when placing an order, we can install the necessary hardware for you.

Zigbee Module

The PPC-CM4-101 industrial Pi PC supports an onboard Zigbee module. The Zigbee controller is TI CC2531, and the Raspberry Pi forum supports it.

For CS12800RA4101P, there is a connector on the backside of the case that you can use to connect the external Zigbee antenna, as described in the figure below. If you need to use WiFi/BT and Zigbee together, we can customized the case and add another SMA connector for you, usually across the rear to the opposite of the current SMA.

Figure 941: Zigbee controller

Zigbee Antenna

The product does not come with the Zigbee module by default.

TF Card Slot

The PPC-CM4-101 industrial Pi PC features 1 x **TF Card (micro SD) slot**. A slot can address up to 128GB of memory.

TF (micro SD) Card Slot

Attention

1. The SD is used for memory extension. It can't be used for system boot-up.
2. This storage extension SD uses the same pins as WiFi on CM4. SD storage and WiFi **can't** be used at the same time.
3. The product does not come shipped with the TF card by default.

Audio Connectors

The PPC-CM4-101 industrial Pi PC features some audio peripherals. It has 1 x **3.5mm audio output jack**.

Also, the PPC-CM4-101 industrial Pi PC has a miniature 2W internal speaker for audio reproduction, as well as a small buzzer for alarm/notification sounds.

Audio Connector (enclosed PC version)

Attention

By plugging in the headphone cable, the internal speaker will be disabled automatically.

PROG Button

The PPC-CM4-101 industrial Pi PC has one button for entering usb download mode, as shown in the figure below.

When booting **with** the button being pressed, the Raspberry Pi will boot from the USB connector. You can use this feature to download the OS software to the internal eMMC. When booting **without pressing** the button, the Raspberry Pi will boot from the internal eMMC.

There is no need to press the button during regular operation. However, if you need to reinstall the OS, please refer to the detailed information on how to reflash the OS from the [Software Documentation](#).

PROG Button

Mounting Procedure

The PPC-CM4-101 industrial Pi PC can be mounted with 4 x **M4** (6mm) screws using the **VESA** (100x100mm or 75x75mm) mount.

The PPC-CM4-101 industrial Pi PC can be mounted with **panel mount** method, enabling simplified installation onto any standard mounting fixture.

Attention

Please make sure the display is not exposed to high pressure when mounting into an enclosure.

You can find detailed information about mounting in the [Mount IPC Guide](#).

Panel mounting

Mechanical Specifications

CS12800RA4101P

For CS12800RA4101P, the outer mechanical dimensions are 276 x 194 x 46mm (W x L x H).

3D Model

PPC-CM4-101 3D model can be viewed in the online doc in a web browser, if you are reading
